1. rice ____
2. books ____
3. money ____
4. oranges ____
5. bread ____
6. water ____

- Translate from English to Czech

This month, our class started a new project about technology and responsible online behaviour. Our teacher explained that many teenagers use the internet every day, but not everyone knows how to stay safe. She told us that we should never share too much personal information online and that we should always check if a website is trustworthy before giving any details.

As part of the project, we visited a media centre in our town. The building was modern, and there were many computers, cameras, and other devices. The instructor showed us a short video about online privacy. In the video, experts explained that hackers don't need many tools to cause problems. We didn't know any of this before, so the video was very useful.

After that, we tried a practical activity. Each group received a laptop and had to create a poster with some rules for online safety. My group didn't find many pictures we liked, but we used some colourful icons from the centre's library. The instructor told us that the best posters could be shown at a town exhibition next month.

Before we left, our teacher asked if we had any questions about social media, online games, or digital communication. Several students asked about how much data apps collect. The instructor explained that apps often collect a lot of information, but users usually don't check the settings.

When the project ended, I felt that I had learned many important things. I now understand that technology can be a great tool, but only if we use it wisely and responsibly.
